

KGP Hustle House × Deevige Classes Pvt Ltd

Website Growth Audit

Hi sir, our team went through your site and identified these 5 things that might be holding your site back from getting more students. Skim the entire audit report and check the site below for the mockup we created.

5 Key Website Problems Holding Back Conversions

1. Weak First Impression

The hero section feels text-heavy and outdated. Parents and students should instantly understand *why Deevige is better* within 5 seconds. Right now, the page lacks a strong emotional hook and modern visual hierarchy.

Fix:

Use a cleaner hero section with:

- Top ranks/results
- Student success visuals
- One strong CTA (“Book Free Counseling Session”)

2. No Clear Conversion Flow

The website behaves more like a brochure than a conversion-focused landing page. Visitors don't know what action to take next.

Fix:

Add sticky CTAs across the page:

- Free demo class
- WhatsApp consultation
- Scholarship test registration

3. Trust Signals Are Hidden

25+ years experience and 60K+ students are powerful credibility assets, but they are visually underutilized.

Fix:

Add:

- Real student results
- Rank cards
- Parent testimonials
- Video reviews
- Media mentions

4. Mobile Experience Needs Improvement

Most students discover institutes through mobile. The current layout feels cluttered and difficult to scan on smaller screens.

Fix:

Create a mobile-first structure with shorter sections, bold headings, and faster loading visuals.

5. SEO Opportunity Is Untapped

Students are actively searching terms like:

- “Best JEE coaching in Malleshwaram”
- “Top NEET coaching Bangalore”
- “PUC integrated coaching Karnataka”

Currently, the website isn’t optimized to rank strongly for these searches.

Fix:

Build SEO-focused landing pages, optimize page structure, improve Google Maps visibility, and create location-based content to consistently attract qualified student leads organically.

We also created a rough landing page direction tailored for Deevige Classes.
