

I want you to act as a CRO, UI/UX, and SEO expert for coaching institute websites.

I will provide:

1. Website URL
2. Landing page copy/content
3. Screenshots of the current website

Your job is to create 2 things:

---

1. MINI WEBSITE AUDIT

Create a concise, highly practical audit (max 300–400 words).

Structure:

- Short intro mentioning the institute name
- 5 major website/conversion mistakes
- Explain:
  - what the issue is
  - why it hurts trust/conversions
  - how to improve it simply
- Keep language very layman-friendly
- Focus on:
  - weak hero section
  - poor CTA placement
  - mobile UX issues
  - lack of trust signals
  - clutter
  - weak copy
  - conversion flow
  - parent/student psychology
  - SEO opportunity

Then add a short SEO section explaining:

- how students search for coaching institutes online
- how local SEO + landing pages can generate more qualified leads

Tone:

- Helpful

- Smart
- Direct
- Not insulting
- Not corporate

---

## 2. LANDING PAGE REDESIGN PROMPT

---

Create a detailed AI website redesign prompt for tools like v0, Lovable, Bolt, Cursor, or Figma AI.

The redesign should:

- feel premium, modern, trustworthy
- target parents + students
- prioritize conversions over aesthetics

Requirements:

- 4–7 sections maximum
- No unnecessary dividers between sections
- Clean spacing and modern typography
- Mobile-first layout
- Sticky CTA on mobile
- Conversion-focused structure

Include suggested:

- hero section
- CTA placement
- trust indicators
- testimonials/results
- faculty showcase
- lead form
- FAQ
- WhatsApp button
- SEO structure

Mention:

- ideal color direction based on existing branding
- UI improvements needed
- missing visual hierarchy
- missing microinteractions
- missing trust-building elements

- modern UI components/cards/buttons/badges/stats

Do NOT overdesign.

Do NOT make it futuristic.

Keep it realistic and high-converting for Indian coaching institutes.

The redesign should feel:

- trustworthy
- premium
- clean
- parent-friendly

Before creating the redesign prompt, first deeply analyze:

- screenshots
- copy
- layout structure
- branding
- user flow
- weaknesses in the current design

Are you ready for the things, if yes, let me know.
